- a support rail capable of being opened and closed by said opening/closing mechanism; and
- a decoration cover coupled to a lateral surface of said support rail, wherein said decoration cover has a predetermined length and height for concealing said opening/closing mechanism.
 - 2. The sunroof of claim 1, wherein said decoration cover comprises:
 - a body frame for covering a gap between said sunroof frame and said support rail to conceal said opening/closing mechanism; and
- at least one fixation part connected to said body frame for attaching said body frame onto a lateral surface of said support rail.
 - 3. The sunroof of claim 2, further comprising at least one rib located on said body frame and connected at a distal end of said body frame.
 - 4. The sunroof of claim 2, wherein said at least one fixation part includes a first fixation part extending out from an upper portion of said body frame for being inserted onto the lateral surface of said support rail.

- 5. The sunroof of claim 4, wherein said first fixation part is configured to snap onto the lateral surface of said support rail.
- 6. The sunroof of claim 5, wherein said first fixation part includes a snap

 connector having a barb.
 - 7. The sunroof of claim 2, wherein said at least one fixation part includes a second fixation part formed with upper and lower clips extending out from an upper portion of said body frame for receiving a lateral surface of said support rail.

- 8. The sunroof of claim 2, wherein said at least one fixation part includes a first fixation part located adjacent a second fixation part.
- 9. The sunroof of claim 2, wherein said body frame includes a border, and said rib15 is formed inside said border and is wavy.
 - 10. A decorative cover for concealing an opening/closing mechanism located between a sunroof frame and a panel support rail in a vehicle, said decorative cover comprising:
 - a body frame having a predetermined length and height for concealing the opening/closing mechanism; and
 - at least one fixation part for connecting said body frame onto a lateral surface of the panel support rail.

- 11. The decorative cover of claim 10, wherein said at least one fixation part includes a first fixation part configured to snap onto a lateral surface of the panel support rail.
- The decorative cover of claim 11, wherein said at least one fixation part includes a second fixation part including upper and lower clips spaced apart to receive a lateral surface of the panel support rail.
